## ABSTRACT:

CHG DATE=19990905 STATUS=O> The use is provided of a fructran with an average degree of polymerisation of at least 15 for the manufacture of a composition for the prevention and/or treatment of colon cancer in non-bovine mammals, particularly in human beings. Also provided is a method of prevention and treatment of colon cancer in a non-bovine mammal, particularly in a human being, comprising administering to said mammal a composition comprising an effective dose of a fructan with an average degree of polymerisation of at least 15. The said composition can be a medicament as well as a functional food. In a preferred embodiment the fructan is inulin, more preferably inulin with an average degree of polymerisation of at least 20.

BASIC-ABSTRACT:

Protector for microbes or cells contg. inulin type fructan as the active component, the degree of polymerisation of the inulin type fructan being pref. 3-6.

Also claimed is a method for the freeze storage of microbes or cells in which microbes or cells are immersed in a soln. contg. inulin type fructan and frozen or freeze dried.

ADVANTAGE - The protector can prevent freeze damage and can improve the survival rate. It is useful in food and drug industries.
